## WHAT WE PROVIDE

### INTELLIGENT RULES

We codify business logic to automate well-defined tasks. In addition, we discover previously unknown logic via data analysis/machine learning that can similarly be codified.

### RELATIONSHIP ANALYSIS

Data are rarely unrelated to each other, and we discover new and useful relationships within the data so that we can predict, optimize for, and obtain desired outcomes.

### MATHEMATICAL/STATISTICAL MODELING

Many business processes are modeled using mathematical and statistical frameworks like MLE, Thompson sampling, and A/B testing, which facilitate optimization for desired positive outcomes.

### MACHINE LEARNING

We employ machine learning (ML) to predict, classify, partition, and analyze data. ML has been shown to provide key insights that would otherwise remain unknown, and we leverage those insights to drive business optimization.
