CASE STUDY: *INTENSIVE RUN-THROUGH*

THE CHALLENGES

Our client, an insurance company, had existing internal applications for employees. However, they had no quality assurance in their development and deployment process so the features were often breaking. The end-users were doing cursory quality checks but they were not experts nor did they know how to do detailed checks of every aspect of the application.

THE SOLUTION

In Time Tec came alongside the client and added onshore and offshore QA engineers to their existing teams. When the client's developers had finished coding, our engineers did an intense and thorough run-through of the application to ensure the expected results were produced. The In Time Tec team also worked to try to break the application to reveal any vulnerabilities.

THE RESULTS :

FREE UP TIME:

The end-users no longer have to do quality assurance checks.

QUALITY IMPROVEMENT:

With more in-depth QA, quality of all applications has improved.
