

**VALIDATING THE STRENGTH  
OF EXISTING SYSTEMS**

*Ensuring the security of  
systems and networks through  
testing and remediation.*

**LUMBER  
SUPPLIER**

**Background**

This nationwide lumber supply company provides building materials to customers in the construction industry.

**THE  
IMPACT**

**100+**  
Devices  
with vulnerabilities  
discovered

**10**  
Vulnerabilities  
detected in  
analyzed devices

**1**  
Week  
to remediate found  
vulnerabilities

## The Challenge - Verifying an Existing System

Our client underwent a change in IT leadership and wanted to verify that their systems and network were secure. They attempted to build plenty of security and defenses in their current system and needed someone to validate their testing.

## The Solution - Expose, Report, Remediate

In Time Tec exposed vulnerabilities in their system through penetration testing, vulnerability scans, and the use of various manual tools. We provided a report of these vulnerabilities to the client and then developed a plan for them to remediate these vulnerabilities with our assistance.

## The Results - Bolstered Security

- ✓ Found gaps where the system could be more secure.
- ✓ Remediated all discovered vulnerabilities in a week's time.
- ✓ Validated working aspects of the current system.
- ✓ Developed a fortified security system using knowledge from testing report.
